

Winding Services

As part of its focus on heavy steel wire ropes, W. Giertsen Services AS has two of the biggest winding machines on the market.

The winding machines

- 250 tonnes' winding capacity
- 18 tonnes' back tension
- Highly accessible at our own deepwater quay
- Transportable by ordinary semi-trailer
- Fully controllable back tension for perfect winding
- Built-in diesel engine or electrically powered
- Full remote control of operations possible
- Among the biggest winding machines on the market

Location

The winding machines are located right beside W. Giertsen Services' big warehouse for steel wire rope at the company's own deepwater quay in Nygårdsviken near Bergen city centre. The quay is in an ideal location and, with a length of 72 metres and water depth of 8.5 metres, it is accessible for most vessels for winding operations and other services. Note that vessels using our winding machines (or other services) are not charged a fee for use of the quay.

Mobile

Normally, a winding machine of this size cannot be transported by road. Our winding machines, however, are specially designed for easy dismantling and road transport if this is necessary to meet customer requirements. ►►

Additional Services

Our highly experienced riggers are at our customers' disposal, and not just for winding operations. Using our own 3,700 tonne press, our riggers can lock and terminate up to 128 mm steel wire ropes.

The moulding of sockets (no limitations) or mounting of swivels can be done at any time. Our products and work come with all the required certificates and documentation.

Information and questions

Please note that this is just a brief description of our winding and related services. For more information, call (+47) 55 94 30 50 or send an email to: services@giertsen.no
